

CURRICULUM

Physiotherapy

The physiotherapy education at Karelia University of Applied Sciences offers a bachelor's degree that is based on solid core competencies. There is a special emphasis on evaluating and promoting the patient's functional abilities, as well as developing the student's counselling skills on therapeutic exercise and movement. Another focus is on multidisciplinarity and expertise in ageing, and digital skills required by the renewing health care services. After graduation, the student has an extensive set of skills that enable him or her act as an expert in the fields of health promoting and rehabilitation. The studies consist of multimodal learning methods, and it is possible to conduct part of the studies abroad.

Degree

Degree Title Bachelor of Health Care

Extent 210 cr / 3.5 years

Typical tasks for graduates

The bachelor's degree in physiotherapy gives you the skills needed to promote people's wellbeing, functional capacity, and bodily exercises in various tasks and environments. As a physiotherapist you can work both in the public and the private sector, and work as an expert, a consult, a developer, or an entrepreneur. Your possible workplaces include health care centres, hospitals or research or care institutes in the fields of social services and health care, rehabilitation and sports. You might be also employed by sports teams, third sector organisations, in different projects, or in completely new careers that are created in the evolving interfaces.

Implementation of studies

The starting points for the studies in physiotherapy are the core competencies in your own field, as well as the common skill requirements of social and health care. All future professionals in the social and health care need skills in customer work, service and field development, and change competence in employeeship and cooperation. These skills are developed in multidisciplinary studies, where you will study together with students of nursing, public health nursing, and social services. The multidisciplinary studies will prepare you for the multidisciplinary working life that will benefit your patients in the best possible way, and these skills will be practiced from the very beginning of your studies.

In the centre of your field-specific skills are research, assessment and therapy competences, as well as coaching and guidance skills. The foundation of these skills is built during the first year, and it will be reinforced throughout the studies. Simultaneously the student will develop his or her ethical competencies, technology and societal skills, and skills in accessibility. These competencies are not built alone, but through constant interaction with the skills shared in the social and health care fields. During your studies, you will learn to work as a physiotherapist both individually and as a part of a work community, while utilising the opportunities provided by digitalisation and technological developments.

You will study both in the different learning environments of Karelia UAS, such as Fysiotikka which is specialised in physiotherapy services, the simulation learning environment Simula and multi-disciplinary Voimala, as well as various other environments in working life. Part of your studies will consist of research and development projects implemented together with different organisations and companies. You have excellent possibilities for international activities through courses mediated in English, projects, student exchange and practical training abroad.

Starting points for learning

Physiotherapy studies are based on the idea of learning as a process that is reflective, experimental, and socially constructed. Thus, learners' personal experiences, active participation, and interaction play an important role. You as a learner are active, self-directing, responsible, and able to utilise constructive criticism. From this viewpoint learning is understood as action that is both the learner's internal process and built around social interaction. This is supported by the methods of exploratory, experiential and collaborative learning.

It is important that you learn to acquire and evaluate information in versatile ways, and that you are able to apply the information to new and changing contexts. Changes in society and in the working life require skills in continuous learning and updating your competencies. This means that central skills in your learning are the ability to develop your learning skills, to utilise technologies that support learning, and to draw information from versatile sources. The goal is also to learn how to make your own learning and development visible to yourself and to others. Reflection and a reflective approach to work are central for a person's individual learning process, but also for the development of a team or work organization.

Structure and Content of Studies

Your degree consists of working life-based core studies (180 cr) and complementary studies (30 cr). The Bachelor's Degree in Physiotherapy gives you the statutory qualification to work as a physiotherapist, and you will be registered as a health care professional.

Your skills in physiotherapy will develop gradually. At the beginning of your studies you will look into the basics of working as a physiotherapist, such as therapeutic interaction and encounters, the structure and functions of a human body and its growth and development, motor learning and guidance, and assessing and promoting mobility and functionality. As your studies advance, you will expand and apply your knowledge of physiotherapy while encountering different types of clients in different environments. You will learn to take responsibility for your part in the physiotherapy assessment, patient safety, and the quality and efficiency of your work. You will also acquire skills in research, development and innovation work, internationality, entrepreneurship, and leadership. In addition, you will write a working life based thesis.

The complementary studies mostly contain modules of 15 credits. We recommend that you complement your professional core studies by choosing the Advance Studies in Physiotherapy (5-15 cr), which consists of:

- Technology in Distant and Home Rehabilitation in Physiotherapy (5 cr)
- Psychophysical physiotherapy (5 cr)
- Wide-ranging rehabilitation (5 cr)

The second module of complementary studies (15 cr), also known as optional complementary studies, can be chosen from courses provided by Karelia University of Applied Sciences, or other institutions of higher education. The following modules suit those who study in the Degree Programme in Physiotherapy:

- Multidisciplinary Rehabilitation
- Agile Development in Social Services, Health Care, and Care and Education Sector (5-15 cr)
- Expertise Pertaining to Russia
- Branding and Innovation Activities
- International Studies 1
- International Studies 2
- Optional language studies (Spanish, Chinese, French, German, Russian)
- Refresher courses in languages (3-6 cr)
- Training Programme of Joensuu Sports Academy (3-15 cr)
- Participation in peer tutoring and student union activities (3-15 cr)

The complementary studies are scheduled to take place in second semesters of the third year. Additionally, complementary studies can be taken during summer months. You also have an option to refresh your language skills in Swedish (3 cr) and in English (3 cr). Participation in Sports Academy training, peer tutoring or student union activities and optional language studies can be spread over several semesters. If the studies mentioned above do not match with your professional objectives, you can discuss other alternatives with your teacher tutor or student counsellor.

If you already work as an entrepreneur or are planning to establish your own business, this can be part of your core and complementary studies, exchange abroad, work practice and thesis in cases that would develop your own business or business idea. You have the chance to get guidance and support in combining your studies with your entrepreneurship or you as an entrepreneur.
