

CURRICULUM

Social Services

Expertise in client work, inclusion, and social influencing have special emphases in the degree programme in Social Services. As part of your studies, you also have a possibility to obtain the qualifications for early childhood education. Studies at Karelia University of Applied Sciences are multi-professional, and the learning environments are close to working life. Your studies will follow the practices of blended learning, and during your studies you will have an opportunity to participate in developing services and service structures, together with regional, national, and international partners.

Degree

Degree Title: Bachelor of Social Services

Extent: 210 cr / 3.5 years

Typical Tasks for Graduates

Those who have graduated with a Bachelor of Social Services degree are qualified to work in the fields of social welfare. The degree gives you skills to work in the fields of, for example, child welfare and family work, mental health and intoxicant abuse, elderly care, rehabilitative work, work with the disabled, or multicultural work. Obtaining at least 60 ECTS credits in early childhood education and social pedagogy grants you the qualification to work in early childhood education, in the duties legislated by the Finnish law (Early Childhood Education and Care Act 540/2018, personnel and eligibility criteria, currently only in Finnish).

Implementation of Studies

The starting points for the bachelor's degree in Social Services are both the general and field-specific needs of social and health care. All future professionals in the field of social services need skills in customer work, service and field development, and change competence in employeeship and cooperation. These skills are partially developed in multidisciplinary studies, where you will study together with students from nursing, public health nursing, and physiotherapy programmes. The multidisciplinary studies will give you tools for your future multi-professional working life.

Studies in Social Services are based on the national competence requirements for graduates of UAS:

- Ethical competence in social services
- Customer work competence
- Social service system competence
- Critical and participatory societal competence
- Research, development and innovation competence, and
- Workplace, leadership and entrepreneurship competence

An emphasis in the studies is on customer work skills, participatory societal skills, and the student's professional development. The studies are offered every year as two versions: contact teaching and blended learning. The studies have a strong connection to work. Each academic year, both the theoretical studies and the practical training will give you experience in how to act in various environments in the social field.

Starting points for learning

Studies in Social Services are based on the concept of learning as a process that is reflective, experimental, and socially constructed. Thus, students' personal experiences, active participation, and interaction play an important role. It is important that you learn to acquire and evaluate information in versatile ways, and that you are able to apply the information to new and changing situations. Changes in the society and in the working life require skills in continuous learning and updating your competencies.

Structure and Content of Studies

Your degree consists of working life-based core studies (180 cr) and complementary studies (30 cr). The basic studies contain practical training (47 cr) and a final thesis (15 cr).

The studies consist of sociological and pedagogic modules, and include a module in social pedagogy. Socio-pedagogical activity means, for example, supporting and educating the client, giving motivation and promoting social changes. The goal of this is to support people's active participation in society, and to prevent social exclusion.

The complementary studies mostly contain modules of 15 credits. The following modules suit especially well those who study in the Degree Programme in Social Studies:

- Child Welfare
- Early Childhood Education
- Special Know-how in Mental Health and Addiction Care
- Multi-professional Rehabilitation
- Optional language studies (German, Russian, Chinese, French or Spanish)
- Agile Development in Social Services, Health Care, and Care and Education Sectors (5-15 cr)
- International Studies 1
- International Studies 2
- Participation in peer tutoring and student union activities (3-15 cr)
- Training programme of Joensuu Sports Academy (3-15 cr)

If you want to receive the qualifications to work as a kindergarten teacher, you will need to take the Early Childhood Education module.

Some of the complementary studies can be completed during the summer months. If you already work as an entrepreneur or are planning to establish your own business, this can be part of your core and complementary studies, in cases which would develop your own business or business idea.
